Mirror display (HUD)

In the skin and its modes added support **Head-Up Display (HUD)** – Mirror Display: navigation information is projected directly into the line of sight on the windshield.

1. Support HUD included in "Map settings" -&gt; "Headband".

2. **HUD** You can enable both day and night, in both portrait and landscape.

   a) when the screen saver, an additional button "Mirror Display"
   b) when you click on this button mode is activated **HUD**, Screensaver is disabled
   c) when the mode **HUD** when you touch the screen anywhere - **HUD** disabled back into the cabin, Screensaver is on again,
   d) if nothing is done, ie do not press on the screen, **HUD** will be switched on permanently, clicking on the current street **HUD** You can enable it without route.

**Other changes:**

1. Added display of version fashion skin immediately after loading in the cockpit and in the navigation menu. Showing off automatically (~ 5s) or tapas on record and it will immediately disappear.

2. In setting added calculator.

3. Added fast switching keyboard is included in the extended menu (bulb)

4. Corrected errors in setting fuel consumption, thanks to HC. amater
5. Utility voice_tts settings embedded in the skin.

6. Added 2D compass mode, bug fixes.

7. Added adjustable transparency Junction View only when the entire screen.

8. TTS-Added notification when entering a tunnel "Tunnel length" from the SW. WertVRV

   - Activate and test alerts to Settings / Sound and Warnings / TTS Pro;
   - full phrase is: "Tunnel length XXX meters."
   - Support distance voice file format, that is possible, the phrase "one and a half kilometer length of the tunnel."
   - for alerts need to check in \i18n\dictionary.voice voice file the following phrase (for example, Russian TTS):

     **Tunnel length %s="Длина тоннеля %s"**

9. In the Settings button on the Map Add "2D north-up" in the browse mode, including in "Preferences / Settings and registration cards / Automatic overview".

   - When you turn on automatic review = "2D north-up" in the review mode is always "2D north-up." After the release of the review the card is returned to its previous state (2D or 3D, or ...). The scale used is the same as for the regular 2D-review;

10. The "phone" in the navigation menu ...

11. Added in the advanced settings (bulb) include scroll function (Scrolling), ie appear on the right side of the button to scroll up and down

12. Added in the advanced settings (bulb) include scroll function (Scrolling), ie appear on the right side button to scroll up and down when you turn on or off this feature of the program is restarted

13. Added in the advanced settings (bulb) includes functions show Glonass satellites

14. In landscape mode, with the appearance of signs DA, padded and figures compressed

15. Speed limit and the substrate (when the extended mode speed limit) are made with a fringing

16. Folder 1280_800 changed to 1024_768 for all resolutions and use the original data.zip 800x480, 1024x768 (version iGO Primo_9.6.7.281004), if you use what - that brandind.zip, then a folder 1280_800 it should be rename too 1024_768

17. Up to 3 minutes increased recovery time from the map display in the cab

18. Added a separate switching the font to speed on the menu button and a high speed (normal font - digital font)

19. For live voice radars added Bulgarian language added another type of radar - Pedestrian Crossing, added blue and white substrate speed
20. Button Color Data **3in1** become the same as the color data on the buttons Trip info:

21. Added switching from skin live voice radar. Now supported 10 folders:

   speedcam_en - English
   speedcam_us - American
   speedcam_de - German
   speedcam_ru - Russian
   speedcam_lt - Lithuanian
   speedcam_fr - French
   speedcam_it - Italian
   speedcam_pl - Polish
   speedcam_cz - Czech
   speedcam_ua – Ukrainian

   **Now entry** skin_audio_path="speedcam_lt", skin_audio_path="speedcam_ru"..... not needed. All other entries in sys.txt should stay

22. If you drop on the radar, then there is another button - "Delete Radar". GPS is off, does not work!

23. Padded high speed becomes transparent when a interchanges and tunnels

24. Added size adjustment cursor (select it from the menu)

25. Added switching lever (low - normal - high) during the middle finger on the screen from top to bottom. "Gestures" are included in "flask"

26. As with the original skins added voiceovers strips and boards

27. Long tap on the center of the screen with the route -> start recording track, repeated long tap -> off track records.
Long tap on the center of the screen, without the path -> input settings in the skin.

28. Added new keyboard functions (thanks to HC. WertVRV, switching is done via entries in sys.txt. By default, all the skins off, ie no additional entries in sys.txt keyboard is the same as before.

   ```
   [keyboard]
   new_portrait_keyboard=0; 1
   full_portrait_keyboard=0; 1
   ```

29. In the cockpit add a button Help Nearby (Help close), which is activated / deactivated in the "Options skin."

30. Changed (added) some records in **sys.txt**:
   Code

   ```
   [skin_arine]
   skin_version=0 ; default - 1 ; show off skin version at startup Primo
   hud_maneuvers_color= from -10 to 10, default - 0; color icon turns only in HUD mode
   skin_new_year=0 ; default - 1 ; congratulations when you start Primo
   ```

31. Rapid removal of fixed radars:
   - Now, after removal of the rapid removal of the radar button in the cockpit, we remain in the cockpit. Before crossing into the navigation menu.
32. In fixed compass direction arrow to display the correct movement direction of motion:
   - arrow shows the direction of motion to the finish.
   - if there are intermediate points, indicates the direction of movement of the first Intermedia. Point after passing the first prom. point - the second ... and only then to the finish (it does not work in the simulation!)

33. Fixed bug when opening a table when a POI parking at the end of the route.

34. Radar overspeed limit sign changes to red if the current speed is higher than the speed limit. Average speed for the camera - when the average speed is higher than the speed limit.

35. Was not active and did not work the button "interactive traffic information" - corrected.

36. Removed TTS by Wiman, for this is the new VX-utility tts_by_wiman_ver. 5.6_ari_mod

37. Added display of the flag of the country in the cockpit, turned on / off in the settings of the skin
   - tap on the flag - show info of the country,
   - long tap - entry in the list of countries.

38. Added display of battery on the menu button turns on / switch settings skins,

39. Fixed substrate current street, now does not fit on the screen shot,
